

Sta-Kleen® Polycarbonate Care and Cleaning Guide

Day-to-Day Cleaning -- Remove ordinary dirt and smudges with mild soap and water. A 10:1 ratio of water to bleach solution may be used as a disinfectant. Rinse the surface with clean water after disinfecting. Dry with a soft, lint-free cloth or towel. The use of conditioners or protectants is not required nor recommended for use on Sta-Kleen Polycarbonate (PC) upholstery – its cleanability is permanent, and won't wear out.

Stain Removal -- Upholstery protected with Sta-Kleen PC is resistant to the most common stains. To keep your furniture looking new, stains such as a ballpoint pen or permanent marker can be dry-erased with a clean, lint-free cloth. Gently rub the area until the stain has been removed. Wet or gooey stains such as food stains (e.g., ketchup or jelly) or topical stains (e.g., antiseptics, lotions, and cream) should first be wiped off with a clean cloth or sponge, then follow the instructions above.

Stubborn Stains -- If a ghost stain remains, apply a small amount of household rubbing alcohol (isopropyl alcohol) to a clean, lint-free cloth and rub the stain until it has been removed. Rinse with a clean, damp cloth, and go!

Blue Jean Dye Resistance - Sta-Kleen creates an invisible barrier to keep the indigo dye from transferring to the upholstery. However, as there are many types of both natural and synthetic dyes used in coloring clothing, we cannot guarantee there will never be any dye transfer. In the unlikely event that any blue jean dye transfer occurs, follow the Stubborn Stains cleaning instructions above.

Chemical Cleaners - The following chemical cleaners/disinfectants have been approved for use on Mitchell products provided the manufacturers' directions are followed.

Bleach 10:1
