

ReCast Care and Cleaning Guide

GENERAL CLEANING and MAINTENANCE: To keep your ReCast faux leather product looking great, it is recommended that a regular cleaning schedule be maintained. Spills and stains should be cleaned up as soon as they appear. Ordinary dirt, smudges, and water-soluble stains such as coffee, tea, juice, soft drinks, milk, beer, and wine can be removed with mild soap and water. Use a clean cloth or soft sponge to gently wipe the stain with soapy water. Don't stop there – it's really important to remove any remaining soap solution by wiping the area with a cloth and clean water, and finally to dry the surface with a soft lint-free cloth or towel. Avoid cleaners containing abrasives, as these can damage the product's coating.

DIFFICULT STAINS: Non-water soluble stains caused by oils, lotions, and certain foodstuffs can be cleaned with 50% solution of Isopropyl Alcohol and water. Rinse the cleaned area with water after applying with the alcohol solution. Dry with a clean, lint-free cloth.

DISINFECTING: A solution of 10 parts water to 1 part bleach may be used as a disinfectant. Wipe the area with a cloth and clean water, and dry thoroughly with a soft lint-free cloth or towel.

CHEMICAL CLEANERS: ReCast products are used in many commercial applications. The housekeeping crews often use strong chemicals for cleaning and disinfecting surfaces. It is imperative that when these chemical cleaners are used that they are rinsed off with a wet sponge or damp cloth.

DYE TRANSFER: It's important to remember that certain clothing and accessories may contain dyes – such as those used on denim jeans – that may migrate to lighter colors of faux leathers. This phenomenon is increased by variations in humidity and temperature and usually isn't reversible. Take an extra step to protect your upholstery by avoiding direct contact with deep denim dyes. The Mitchell Group assumes no responsibility and cannot be held liable for dye transfer caused by external contaminants unless the product specification clearly states that it is resistant to dye transfer.

SUNLIGHT: Faux leather, like most upholstery fabric, can fade and break down if left sitting in direct sunlight for extended periods. Unless you're using upholstery that's been specifically designed to withstand harsh rays, protect it by keeping it out of direct sunlight.

DISCLAIMER: This guide addresses the care and cleaning of The Mitchell Group's faux leather coated fabrics. The care and cleaning methods covered in the guide will provide the best protection for these products. However, not all stains can be removed, especially if the stains are not addressed immediately. This information does not relieve the user from the responsibility for the correct and safe use of the product and cleaning methods. The Mitchell Group is not responsible for any defect caused by the use of cleaning solutions not included in this guide. In addition, the product warranty will be voided if any other cleaning methods are used on this product.
